TP100 NUTRITION TECHNOLOGY: “SHIELD” PROTECTING THE HEPATOPANCREAS DURING THE NURSERY STAGE

In intensive shrimp farming, the nursery stage is considered the “**critical stage**” that determines the success of the entire production cycle. However, this is also when post-larvae shrimp are most vulnerable to challenges such as **Translucent Post-Larvae Disease (TPD)** and **Early Mortality Syndrome (EMS)**.

To address these challenges, **Uni-President Vietnam** introduces **TP100**, a **specialized nutritional solution** formulated to provide a **strong and stable** start for shrimp.

KEY ADVANTAGES

Advanced formulation: Specifically formulated to protect and enhance the hepatopancreas and gut health of post-larvae shrimp.

Proactive disease prevention: Strengthens immunity, helping shrimp resist diseases such as TPD and EMS from the early stage.

Optimized particle size: Matches the feeding behavior of small shrimp, reducing feed loss and minimizing water pollution.

Strong foundation: Healthy hepatopancreas development ensures a successful and sustainable harvest.

TP100

FEED INGREDIENTS

Fish meal, soybean meal, wheat flour, fish oil, lecithin, vitamins, and minerals.

COMPOSITION

Code	TP100		
Moisture, max (%)	11	11	11
Crude protein, min (%)	50	50	50
Crude fat, min (%)	10	10	10
Crude fiber, max (%)	4	4	4
Ash, max (%)	18	18	18
Shape	Powder	Crumble	Crumble
Size (mm)	Ø 0.1 - 0.2 (60 - 80#)	Ø 0.2 - 0.35 (50 - 60#)	Ø 0.35 - 0.5 (40 - 50#)
Packing (kg)	1	1	1
